CALL FOR PAPERS

ACM Transactions on Embedded Computing Systems

Editor-in-Chief
Tulika Mitra, National University of Singapore, Singapore

Information For Contributors

The design of embedded computing systems, both the software and hardware, increasingly relies on sophisticated algorithms, analytical models, and methodologies. ACM Transactions on Embedded Computing Systems (TECS) aims to present leading works relating to the analysis, design, behavior, and experience with embedded computing systems. TECS welcomes original research articles, industry design papers, perspectives, tutorials, and surveys that help advance the field by addressing the key challenges.

The scope of TECS includes, but is not limited to, the following topics:

- Embedded software design and analysis
- Architectures, accelerators, and system synthesis
- Hardware-software co-design
- System-level modelling and analysis
- Verification and validation
- Real-time systems
- Security, privacy, reliability
- Low-power design and sustainability
- Embedded machine learning
- Autonomous embedded systems
- Industrial practices and case studies
- Embedded systems education
